Guide to buying a new home

There are many advantages to buying a brand new home. To help you decide whether a new home is right for you, haart have created this buying guide

Getting started

When deciding between buying a new property, purchasing an older property or building your own property, ask yourself the following questions:

- How much do you want to spend?
- How much time and money do you want to invest on improvements?
- What amenities can you live without?
- What kind of area do you want to live in?

Benefits/drawbacks of older homes

- Older properties tend to have more character than newer properties. You may find some Victorian or Georgian houses in need of modernisation but full of original features, well within your budget.
- These properties often need re-wiring, new boilers, central heating, insulating and decorating throughout which can take a lot of time, money and effort but you can have a lot of fun putting your own mark on the property and restoring some of the features back to their original glory.
- What's more your efforts could significantly enhance the value of your property once the modernisation is complete.
- However, there are more hidden costs associated with older properties including the need for re-pointing, damp proofing etc.
- But older homes do tend to have larger rooms and gardens, ideal for growing families or those who like a bit of space!

New homes

- Buying a brand new property, fitted with a luxury designer kitchen and en suite bathroom can prove irresistible. On top of that new homes are generally cheaper to run than older properties as they are built to a higher standard.
- New homes come with more amenities and conveniences. They tend to feature more built-in appliances, including dishwashers, and virtually all of them have central heating systems.
- Studies show that occupants of new homes are almost six times less likely to die from fire than occupants of older homes. New homes generally come with smoke detectors and with central heating systems that reduce the need for space heaters, which can sometimes cause fires.
- New homes are also thought to be more energy efficient because of better windows, improved heating and cooling systems and a better use of insulation. They also require less maintenance because they are, after all, newer and come equipped with the conveniences a buyer is pursuing.
